Nitin Gupta
Software Engineer

House no-498, Block B-1,
Sultan Puri, Delhi-110086
8285698087
nitin16@navgurukul.org
https://github.com/nitingupta220

Skills

HTML, CSS, **JavaScript**, jQuery, Bootstrap, AngularJS, Python,**React**, React Native and NodeJS

Projects

Proxy Server

A simple proxy-server for adding **CORS** on your **GET** requests and all the requests are cached using **Redis**. So, when you make a request to an endpoint and if you make the second request to the same endpoint it will save your time and network request by giving you the results from the cached store instead of the server.
https://github.com/nitingupta220/proxy-server

Github Actions Firebase(React)

In this project I used Github Actions and Firebase to deploy an app to the firebase hosting.
https://github.com/nitingupta220/github-actions-firebase

Readme Generator

A simple tool to generate beautiful Readme files.
This tool is also published on npm as well.
https://www.npmjs.com/package/@nitingupta220/generate-readme

PDF Generator

Another **npm package** which is used to generate PDF for any webpage.
https://www.npmjs.com/package/@nitingupta220/pdf-generator

Covid19 Tracker (React)

By using an Open API showing Covid19 patients for all over the world.
https://github.com/nitingupta220/covid19-tracker

RealTime Chat

By using **Socket.IO** and **Nodejs**, I build a realtime chat engine which is also connected to the MongoDB via **Mlab** so each message is stored in the database.
https://local-chat-demo.herokuapp.com/

Todo App (MERN)

Classical ToDo App built using MERN(Mongo, Express, React, Node) stack. Also, saving the data in the cloud using Mlab.
https://github.com/nitingupta220/todoapp-mern

Movie Search App

In this project, I use the OMDB API and axios to get the information of the desired movie. There is one text box where you can search any movie.

nitingupta220.github.io/MovieSearchApp

Travis CI

In this project, I used Travis CI to deploy a React App to Github Pages.

https://github.com/nitingupta220/travis-ci-demo/

TodoApp API(Flask)

In this project, I use Flask to write the API for Todo App where you can add, edit, delete the tasks which can save into the MongoDB database.
